

3D Scanning & Mapping

Your starting point for brownfield projects

YOUR BENEFITS

- Fast and precise generation of a digital twin of your existing mixing line and building
- Easy access and handling of scan data via web interface (360° pictures, POI linking)
- Excellent basis for retrofit engineering and exchange of equipment

If you are planning to renew your mixing line or to add further production capacity to an existing production environment a **3D scan and mapping** of your assets lays the basis for state-of-the-art engineering performed by **HF Systems**. The fast and accurate 3D-laser scan enables you to capture all equipment, building and infrastructure details within less than a week.

No need to look for outdated paper drawings anymore; Harness the future of plant engineering.
